Systems & Network engineer

Fond of technology since the beginning of my teenage, I have been interested by open source softwares early, and have been able to build a strong personal experience on Linux systems, mainly in the Debian family.

I am in perpetual watch for new products and technologies, I like innovation, and I really appreciate what technology brings us. My ideal work place is a small to medium company that do not try to constraint my skills, and allows me, next to other passionates, to share my passion.

Some technologies I have worked with: Linux, Debian, Ubuntu, Radius, Cisco, Powershell, EC2, puppet, docker, git, nginx, nodejs, tomcat, redis, mongodb, PostgreSQL, MySQL, PHP, Javascript, HTML/CSS, Java ...
